

Appointment Trends Over Time

Tracks the total number of appointments and how many patients showed up, helping identify seasonal or monthly trends in patient attendance.

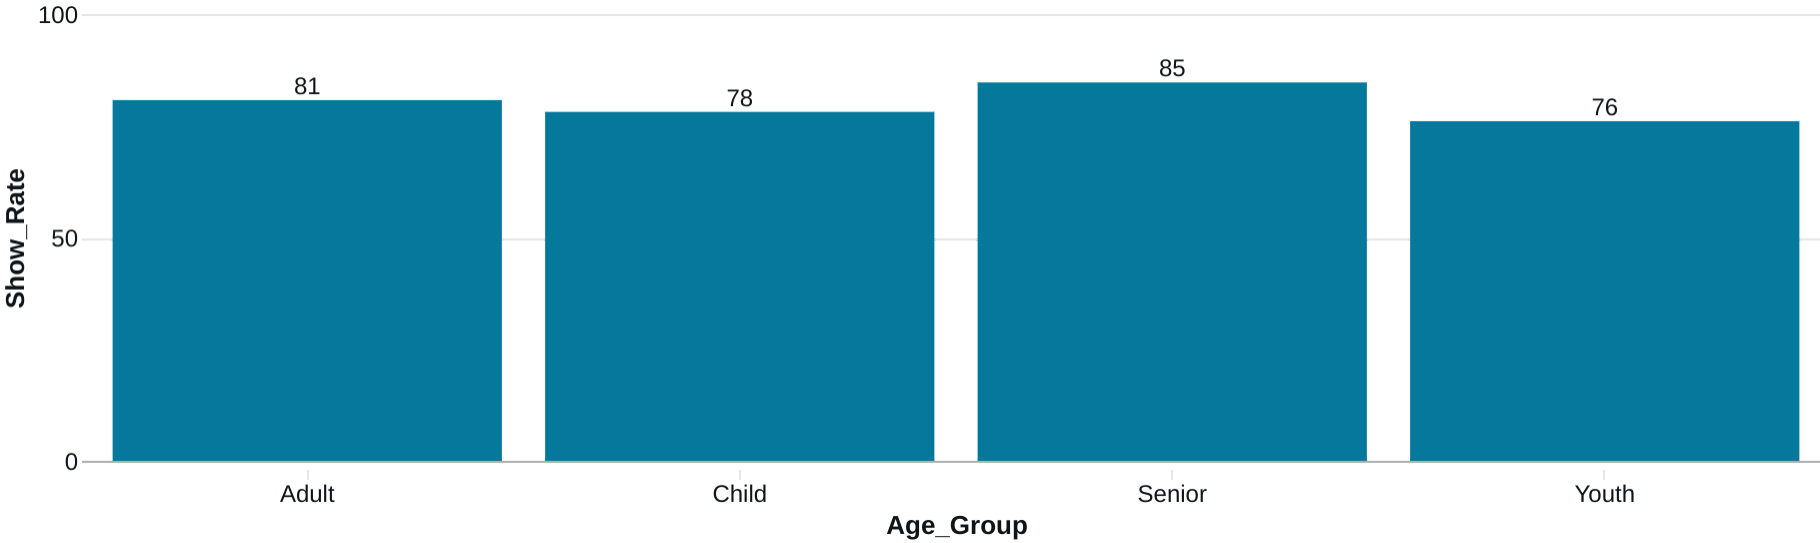

Show Rate by Gender

This bar chart compares the no-show rates between male and female patients by calculating the percentage of missed appointments. It helps identify if there's any gender-based trend in appointment adherence.

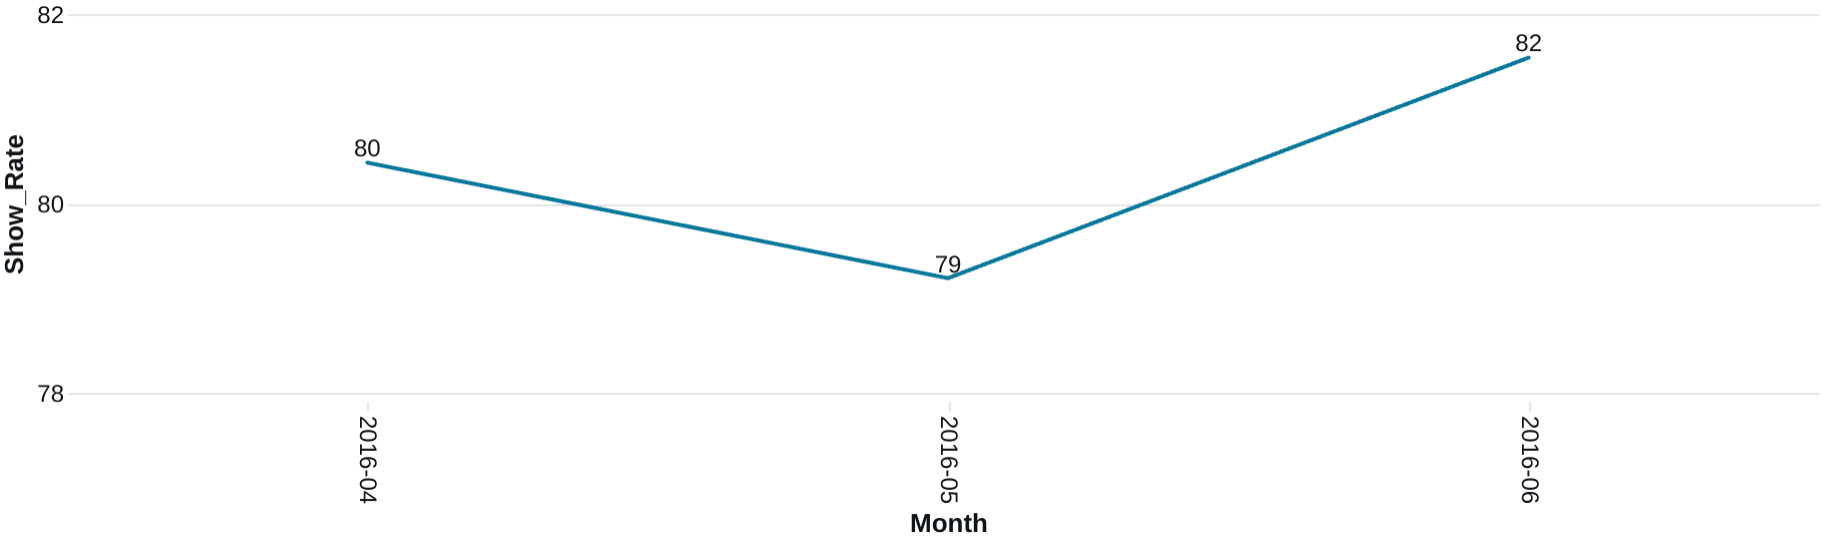

Show Rate by Age Group

This visualization displays how appointment no-show rates vary across different age groups. It helps uncover which age segments are more likely to miss their scheduled medical appointments.

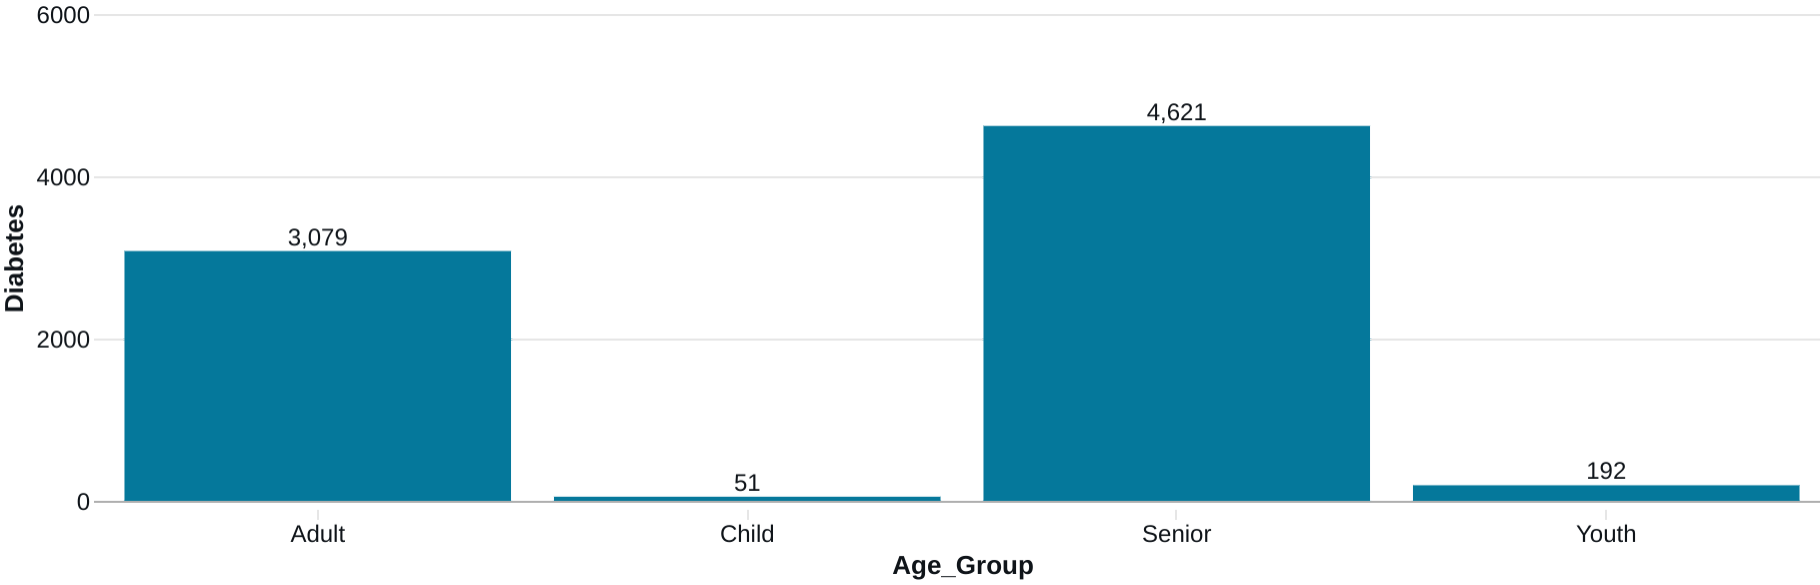

Monthly Show Trend

This line chart shows the monthly trend of no-shows, highlighting seasonal patterns or changes in patient appointment adherence over time. It helps identify peaks in no-show behavior across months.

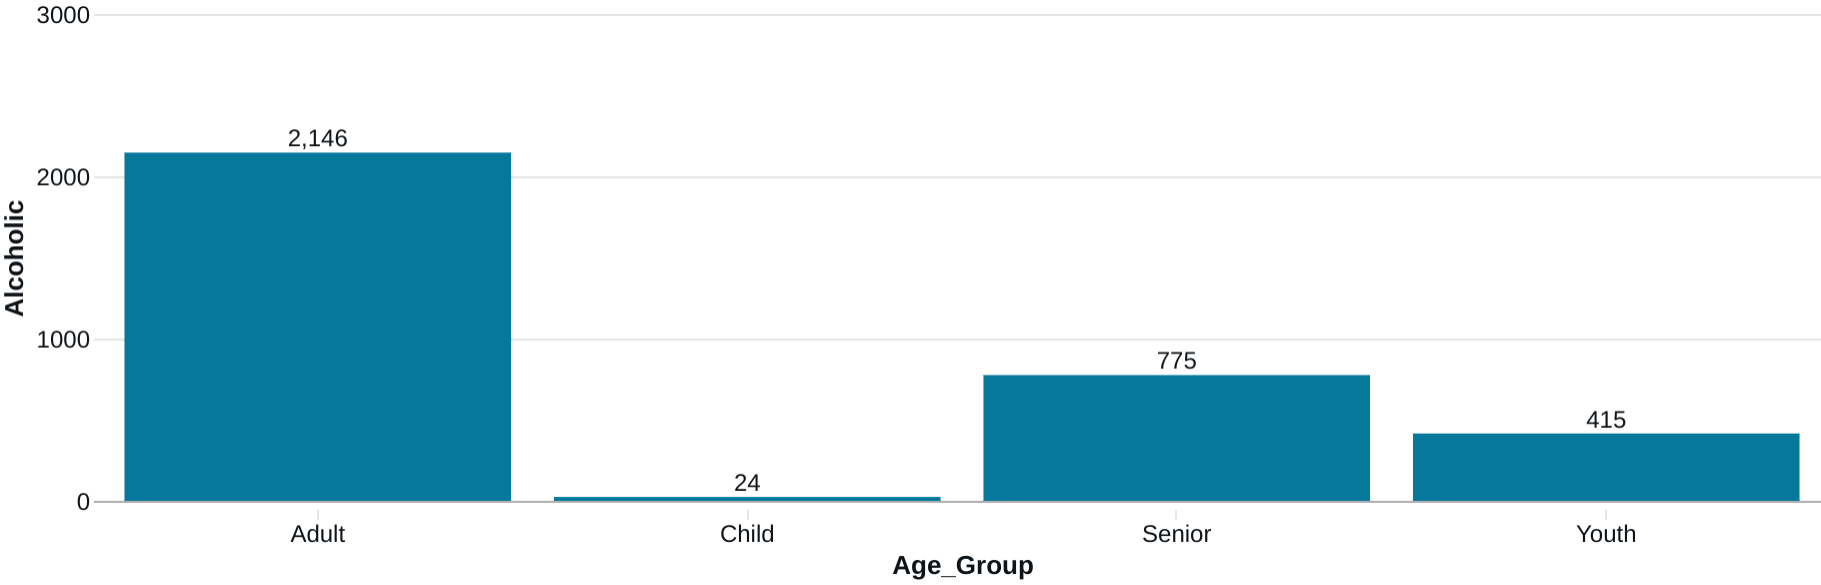

Age Group vs Diabetes

This chart shows the distribution of diabetic patients by age group, helping to identify which age brackets are more affected by diabetes.

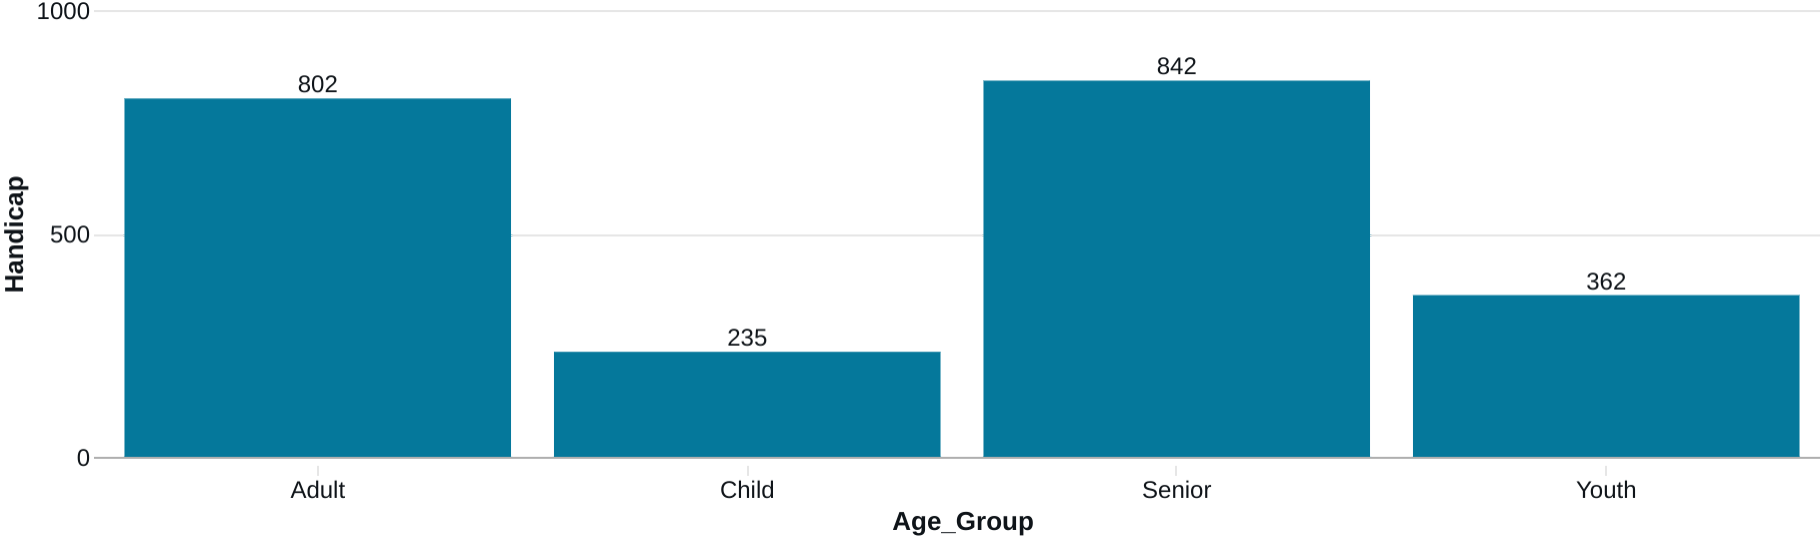

Age Group vs Alcoholism

This visualization represents the count of alcoholic patients within each age group. It gives insight into how alcohol-related health concerns vary with age.

Age Group vs Handicap

This chart illustrates the number of patients with disabilities across age groups. It is useful for identifying the demographic impact of handicaps in the patient population.

Age Group vs Hypertension

This bar chart displays the count of patients with hypertension across different age groups. It highlights how the prevalence of hypertension increases or decreases with age.
